

## **Add On Injection Units for 2-Shot Molding**

At Vector Injection, we are committed to delivering the best solutions to our clients, that is why we are proud to offer our X-Caliber add-on plastic injection unit as a superior alternative to 2-shot injection molding machines.

The X-Caliber provides a cost-effective solution that can be seamlessly integrated with existing injection molding machines, eliminating the need for a complete equipment overhaul. With a modular design that facilitates easy installation, maintenance, and repair, our add-on unit ensures maximum uptime and operational efficiency, minimizing production downtime and costs.

The servo-electric X-Caliber is designed with cutting-edge engineering principles, incorporating the latest technologies and materials to ensure exceptional performance and efficiency. Our add-on unit offers unparalleled flexibility with unmatched accuracy and repeatability representing the pinnacle of innovation and engineering excellence in the injection molding industry.

X-Caliber X-30 horizontal platten mount

### **Unlocking Technological Advantages: Exploring the Specialty Application**

The compact size enables multiple X-Caliber injection unit installations small machines.

The controls are consolidated into a single HMI configuration and electrical enclosure.
